HOW TO INSTALL ECOWALL OSB	55

Friendly interior in a unique style.

EcoWALL OSB wall panels are an intriguing decorative solution that will work in a wide variety of interior designs: modern, Scandinavian, loft. Thanks to the large formats of the panels, you can quickly decorate the surface of the wall, giving the room a unique style.

OSB's raw, diverse texture, subtly visible beneath decorative patterns, inspires one-of-a-kind space decor. This out-of-the-box metamorphosis of OSB goes beyond the ordinary, leaving all that is best about natural OSB.

JAPAN STYLE COLLECTION

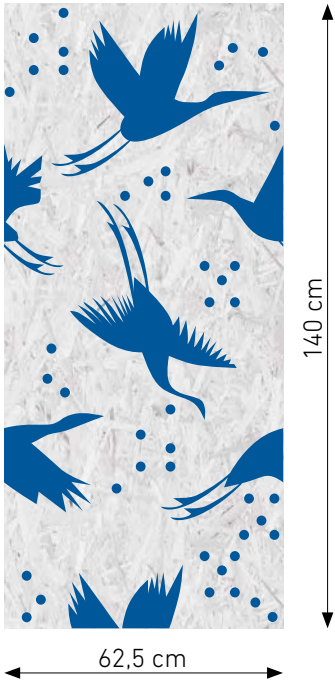

FLYING CRANES

The pattern with blue cranes will retain that summer vibe in your interior. In combination with a whitewashed floor and furniture in shades of beige, it creates a holiday atmosphere.

NATURAL STYLE COLLECTION

FLOWERS

The floral pattern references Nature and blends beautifully with all wooden elements. The long, slender chips characteristic of OSB are gently visible.

NATURAL STYLE COLLECTION

DANDELIONS

If we like the OSB texture, but don't necessarily want to introduce the color of the panel into the interior design, DANDELIONS are the perfect solution.

ART STYLE COLLECTION **GOLD**

Its simple geometric patterns with only slightly visible outlines of OSB chips within a dark background are enough to create a characterful space.

HOW TO INSTALL ecoWALL OSB

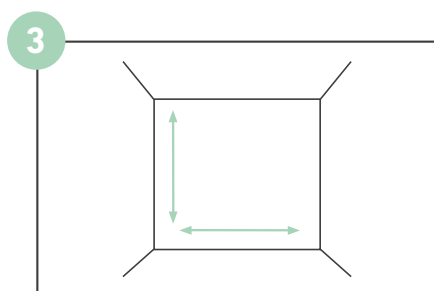

TOOLS NEEDED

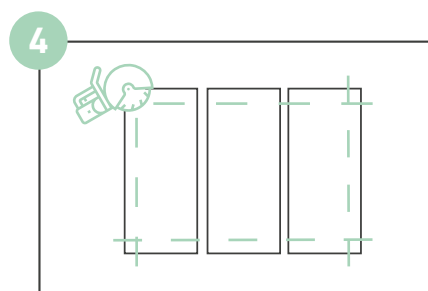

NOTE: Leave the panels in the room where they will be installed for 72 hours before installation.

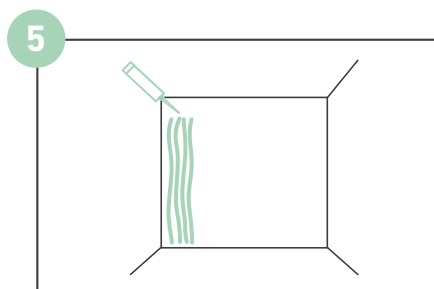

Make sure the surfaces to be covered are well prepared (that they are even, dry, stable and durable).

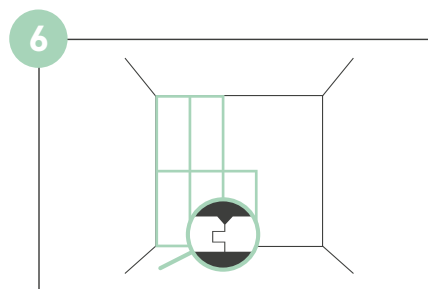

Measure the height and width of the wall.

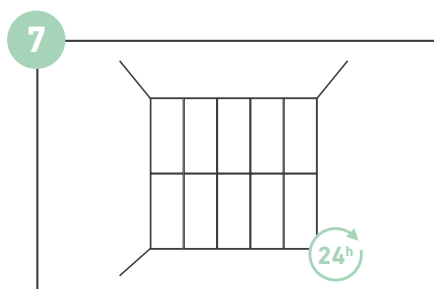

If the panels do not match these dimensions, trim them using a circular saw. Do this only where necessary (for example, at the top, bottom or sides).

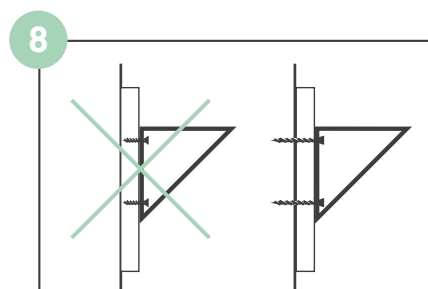

Apply at least four vertical strips of adhesive* to the wall per row of panels. Keep 3 mm of ventilation space between the panel and the wall.

Glue the panels directly to the wall. Start from the top or bottom. Connect each panel to the previous one by inserting the feathers on the sides into the grooves.

Allow the wall to dry for at least 24 hours, depending on the adhesive manufacturer's recommendations.

The panels are not designed for higher service loads. In places where higher loads are expected, install additional reinforcements directly to the wall.

*We recommend single-component adhesive for panels and parquets.
